

JUST LOOK AT IT...

LOGIC LOOK ARGB MIDI

THE BEST IS INSIDE

When building a computer, you probably noticed how well modern components are now manufactured. Even if they don't have RGB backlighting, individual design elements just beg to be exposed to the light of day. A graphics card with an often elegantly designed backplate, RAM modules with embossments on the heat sink, a processor cooler - all this can look very aesthetic.

Therefore, if you love admiring the purchased components - the Logic Look PC case is for you! The glass side and front panel expose the entire interior of the computer in the best possible way. However, not only aesthetic solutions speak for this „PC box“. There are also three 120 mm ARGB fans with a controller, a USB-C port and airy elements in the lower part of the structure that improve air circulation.

First of all, Logic Look ARGB Midi is a PC case that pleases the eye with the installed components. The other practical features of the case are just a nice addition.

CHOICE IS YOURS

MODERN WHITE

BEAUTIFUL INTERIOR

Tempered glass side and front panel are the best way to present installed components. If you have spend a lot of money on impressive-looking RAM modules, a modern graphics card and a processor cooler, just take advantage of the opportunity to see the interior. It is worth enjoying the sense of sight, especially if you are building a computer for gaming and entertainment.

AIR FLOW

SIMPLY NOT HOT

Three 120 mm ARGB fans are installed in the case. To maintain the best possible air circulation, a fan mounted on the back extracts hot air. One of the fans at the top, just above the processor, also works in the same way. The second one - the one mounted closest to the front panel - forces cold air inside. Thanks to this ventilation system, these fans cool the inside of the computer in the best possible way.

A case that is easier to bypass than to jump over

Even though it is a MIDI ATX standard case, it takes up very little space. Thanks to its rare design, the housing is tall but relatively short. This design is perfect for situations when you don't have a deep desk and you value every square centimeter of space.

TEMPERED GLASS

The front and side panels are made of tempered glass. A great solution for structures where the presentation of installed components is particularly important.

READY FOR GAMING COMPONENTS

Possibility to install **graphics cards up to 320 mm** and the **maximum CPU cooling height up to 165 mm** allows for the installation of most efficient components available on the market.

PROTECT YOUR COMPUTER FROM DUST

DUST FILTERS

There is a dust filter placed under the power supply. Minimizes the amount of dust sucked in by the power supply fan, positively affecting its operating temperature and service life.

An additional filter is located on the top of the case. Thanks to this, it effectively captures unwanted dust and protects the installed components. It also protects against dust that enters the computer by gravity throughout the day, even when the computer is turned off.

VENTILATION

The front and side panels of the case at the height of the power supply tunnel are perforated. This improves the ventilation of the entire structure, ensuring better air circulation and thus the lowest possible temperatures.

Thanks to the perforations, installing two additional 120 mm fans on the power supply tunnel helps to cool the entire computer even more.

Logic Look is also adapted to install water cooling. Radiators in sizes 120 mm / 240 mm can be installed on the top of the case.

THE BEAUTY OF ARGB

A gaming case must look nice. Therefore, pre-installed ARGB fans add beauty to the case and the entire gaming station.

The backlight color can be freely changed from predefined settings using the LED button on the case control panel.

PANEL I/O

Convenient access to the top panel

Convenient access to the top panel with two USB 3.0 ports and one USB-C port. There is also one minijack connector for headphones and a microphone, a power button and a button to control the fan backlight.

EASY INSTALLATION

— LOGIC LOOK ARGB MIDI

Everything here is well thought out and intuitive. Building a computer in this case is a pleasure and is child's play.

PLACE FOR PSU

TUNNEL FOR PSU

A gaming computer must have a good and powerful power supply. That's why we made sure there is plenty of space and his operation remained as cool as possible. The maximum length of the power supply with the installed disk basket is 160 mm.

There is a dust filter under the power supply, which effectively protects the operation of the power supply against dust.

7 PCIe EXPANSION CARD SLOTS

Seven PCIe expansion card slots. This is the optimal amount for installation graphics card and network card.

FAN CONTROLLER

The factory-installed fan speed controller can support four ARGB fans.

—LOGIC LOOK ARGB MIDI

Home & Office

Despite its gaming origins, the case will also be suitable for office tasks and everyday work. The ability to build a universal and efficient computer is undoubtedly its advantage.

SSD / HDD

THERE IS ALWAYS A PLACE

If you play, work or study on your computer, you need a sufficient amount of space. Applications that constantly „grow“ from year to year require more modern equipment. That's why we provide enough space for SATA drives in the Logic Look case to guarantee the necessary space for games and programs.

There is a mounting space for a 2.5" drive on the motherboard tray. In turn, the power supply tunnel can accommodate one 2.5" drive and one 3.5" drive.

A total of 3 drives can be installed in a configuration of 2 x 2.5" SSD and 1 x 3.5" HDD.

5 REASONS WHY IT'S WORTH HAVING IT

3 RGB FANS

Factory-installed ARGB fans with selectable illumination mode.

TEMPERED GLASS

Front and side panels made of tempered glass for the best appearance of the installed components.

PRACTICAL

A practically placed panel on the top of the case with USB 3.0 and USB-C.

CONTROLLER

Fan speed controller installed.

DUST FILTERS

Dust filters on the top and bottom of the case.

FEATURES

Modern design.

PSU tunnel.

Good air flow.

MIDI ATX size.

Ready for water cooling.

Two dust filters.

3 x 120 mm ARGB pre-installed.

Fan controller.

2 x USB 3.0 and 1 x USB-C

Tempered glass side and front panel.

Perforated structural part at the height of the power supply.

Technical specification

3 x port USB (1 x USB-C and 2 x USB 3.0)

HD Audio. 1 port headphone and 1 port microphone. Led i Reset.

Fans mounting place:

- PSU tunnel 2 x 120 mm
- top 2 x 120 mm
- rear 1 x 120 mm

Ready for water cooling: Yes.

- 120mm / 240 mm top
- 120 mm rear

Pre-installed fans:

- 2 x 120 mm ARGB top panel.
- 1 x 120 mm ARGB rear panel.

Fan controller: Yes. Possibility to connect 4 fans.

Drive mounting locations:

- Inner:
 - Basket 1 x 2,5" i 1 x 3,5".
 - 1 x 2.5,' motherboard tray.
- PCI slots: x 7

ATX power supply installation: at the bottom in PSU tunnel

Maximum length of the power supply ATX: 160 mm
(with disk basket mounted)

Dimensions [length * width * height]

Chassis dimensions: 332 mm * 212 mm * 470 mm

Case: 346 mm * 212 mm * 487 mm

Max motherboard size: ATX

GPU length: do 320 mm

Max CPU height: 165 mm

Dust filters: bottom and top

Available colours: black / white
