VOLCANO PERUN APEX ARGB MIDI

Fashionable, modern design. Plenty of space for components. 4 ARGB fans included. Perfect ventilation and air circulation.

FANS

3 x 140 mm ARGB fans on the front and 1 x 140 mm ARGB on the back of the case. Fan speed controller included.

DESIGN

Original design of the front panel.

GLASS

Tempered glass on the side panel.

GPU STAND SUPPORT

Support for the graphics card. Additionally, you will also find a screwdriver, a cleaning cloth and a screw box.
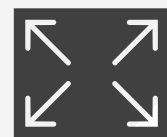

AIRFLOW

Very good ventilation and air circulation.

NO SCREWS
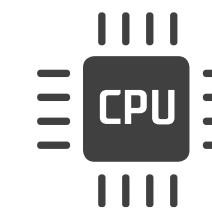

The side panels are mounted with snaps.

CAPACITY

Great interior design possibilities.

QUALITY

The use of high-quality materials during production ensures its durability.

CPU COOLING

Possibility to install a processor cooler with a maximum height of 185mm.

FUNCTIONAL

Functional interior for 3.5" HDD and 2.5" SSD hard drives.

GPU

Space for graphics cards up to 390 mm. Vertical card mounting possible.

DUST FILTERS

Dust protection filters.

WHAT A GOOD PC CASE!

If you are looking for a unique look for your computer and you value modern, fashionable and bold design, the Volcano Perun case may be a great choice. The original design of the front panel with irregular shapes brings to mind thunder and lightning, symbolizing freedom, strength and power. If you're someone who buys with your eyes, this case will make you happy every time you look at it.

Of course, appearance is not the only strong point of this PC case. There are a lot of practical solutions here, such as four preinstalled 140 mm ARGB fans with a controller and four dust filters (to keep the interior clean). Additionally, there are side panels mounted with snaps, one of which is made of tempered glass and the other is from the service part with a ventilated lower part for the best possible air circulation and maintaining low temperatures. There are also practical accessories such as rubber cable entries and a support for the graphics card. And the whole thing is complemented by plenty of space for long graphics cards and a high CPU cooler.

There is also space for four hard drives to install all your favorite games. The easily accessible I/O panel at the top of the case with two USB 3.0 ports and one USB-C port facilitates everyday use of the computer.

A case worthy of every gamer!

MESH PANEL WITH MAGNETIC FILTER

Mesh top panel for best air circulation. Ready for water cooling.

ARGB

One 140 mm ARGB fan

3 x ARGB FANS

Three 140 mm ARGB fans pre-installed.

SNAPS MOUNTING

Side panel mounted with snaps.

DUST FILTER

Dust filter mounted to the front panel.

POSSIBILITY OF VERTICAL INSTALLATION OF THE GRAPHICS CARD

Dedicated PCIe slot frame for vertical GPU mounting.

TEMPERED GLASS

Glass side panel for best display of components.

VENTILATION HOLES IN THE PSU TUNNEL

Ventilation holes for best cooling of drives and power supply in the tunnel.
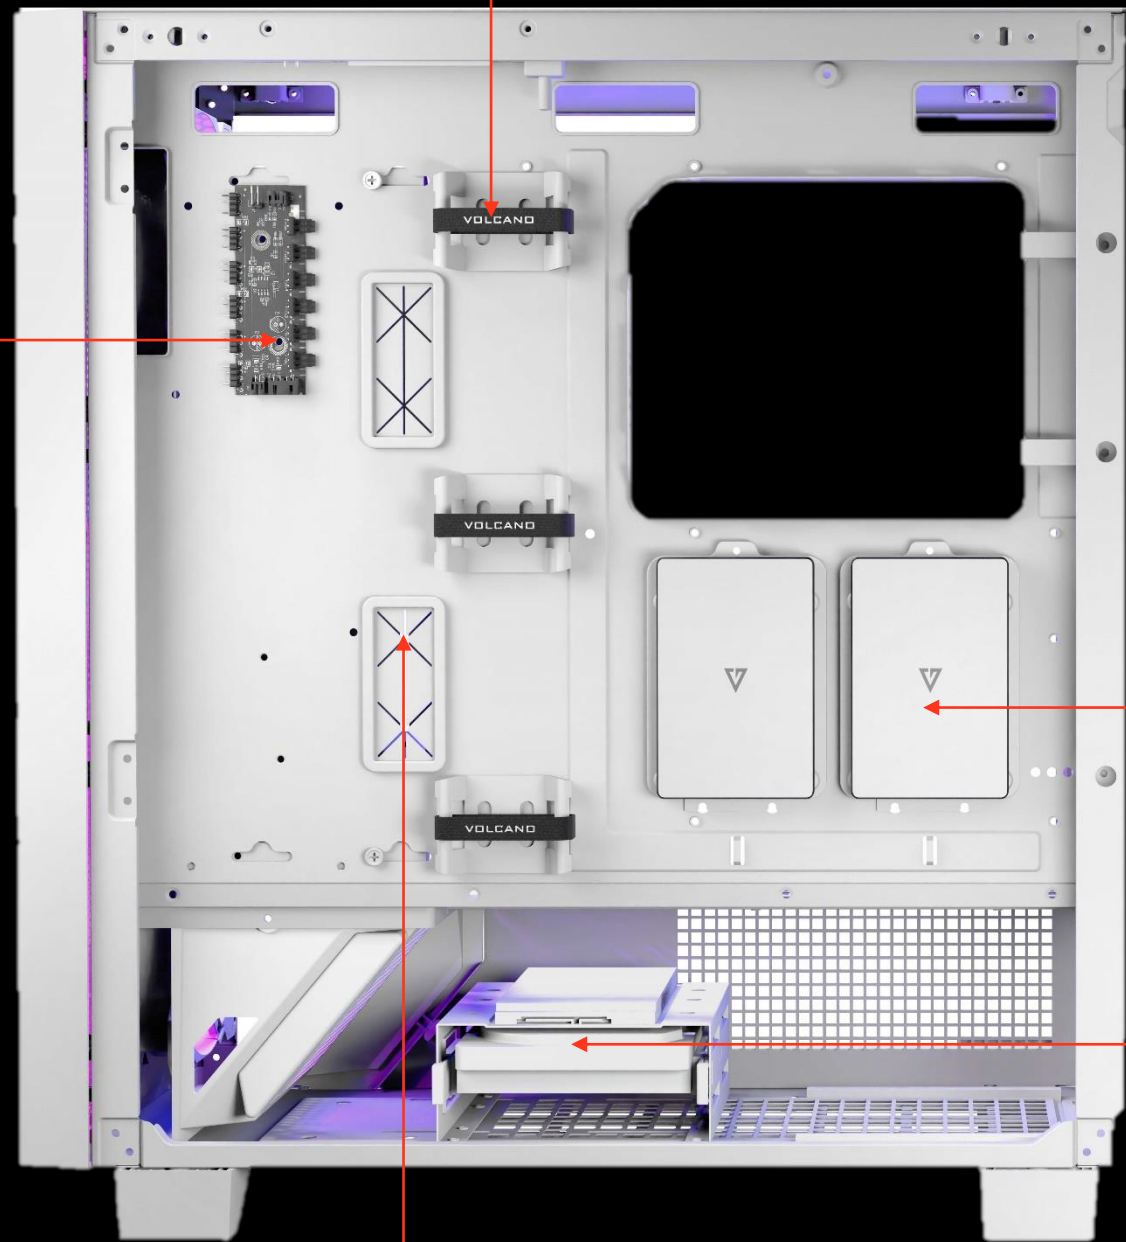

DESIGN

Modern and bold design of front panel.

VOLCANO

CABLE VELCROS

Velcro straps ensure optimal organization of cables.

ARGB CONTROLLER

Controller for 6 ARGB fans.

GPU STAND

Adjustable GPU support.

HDD / SSD PLACE

Installing drives on the motherboard trays and in the power supply tunnel.

ORGANIZING ELEMENT

Sliding and removable organizing element with a card support for best air circulation and cables organization.

RUBBER GROMMETS

Rubber cable grommets provide protection and facilitate component installation.
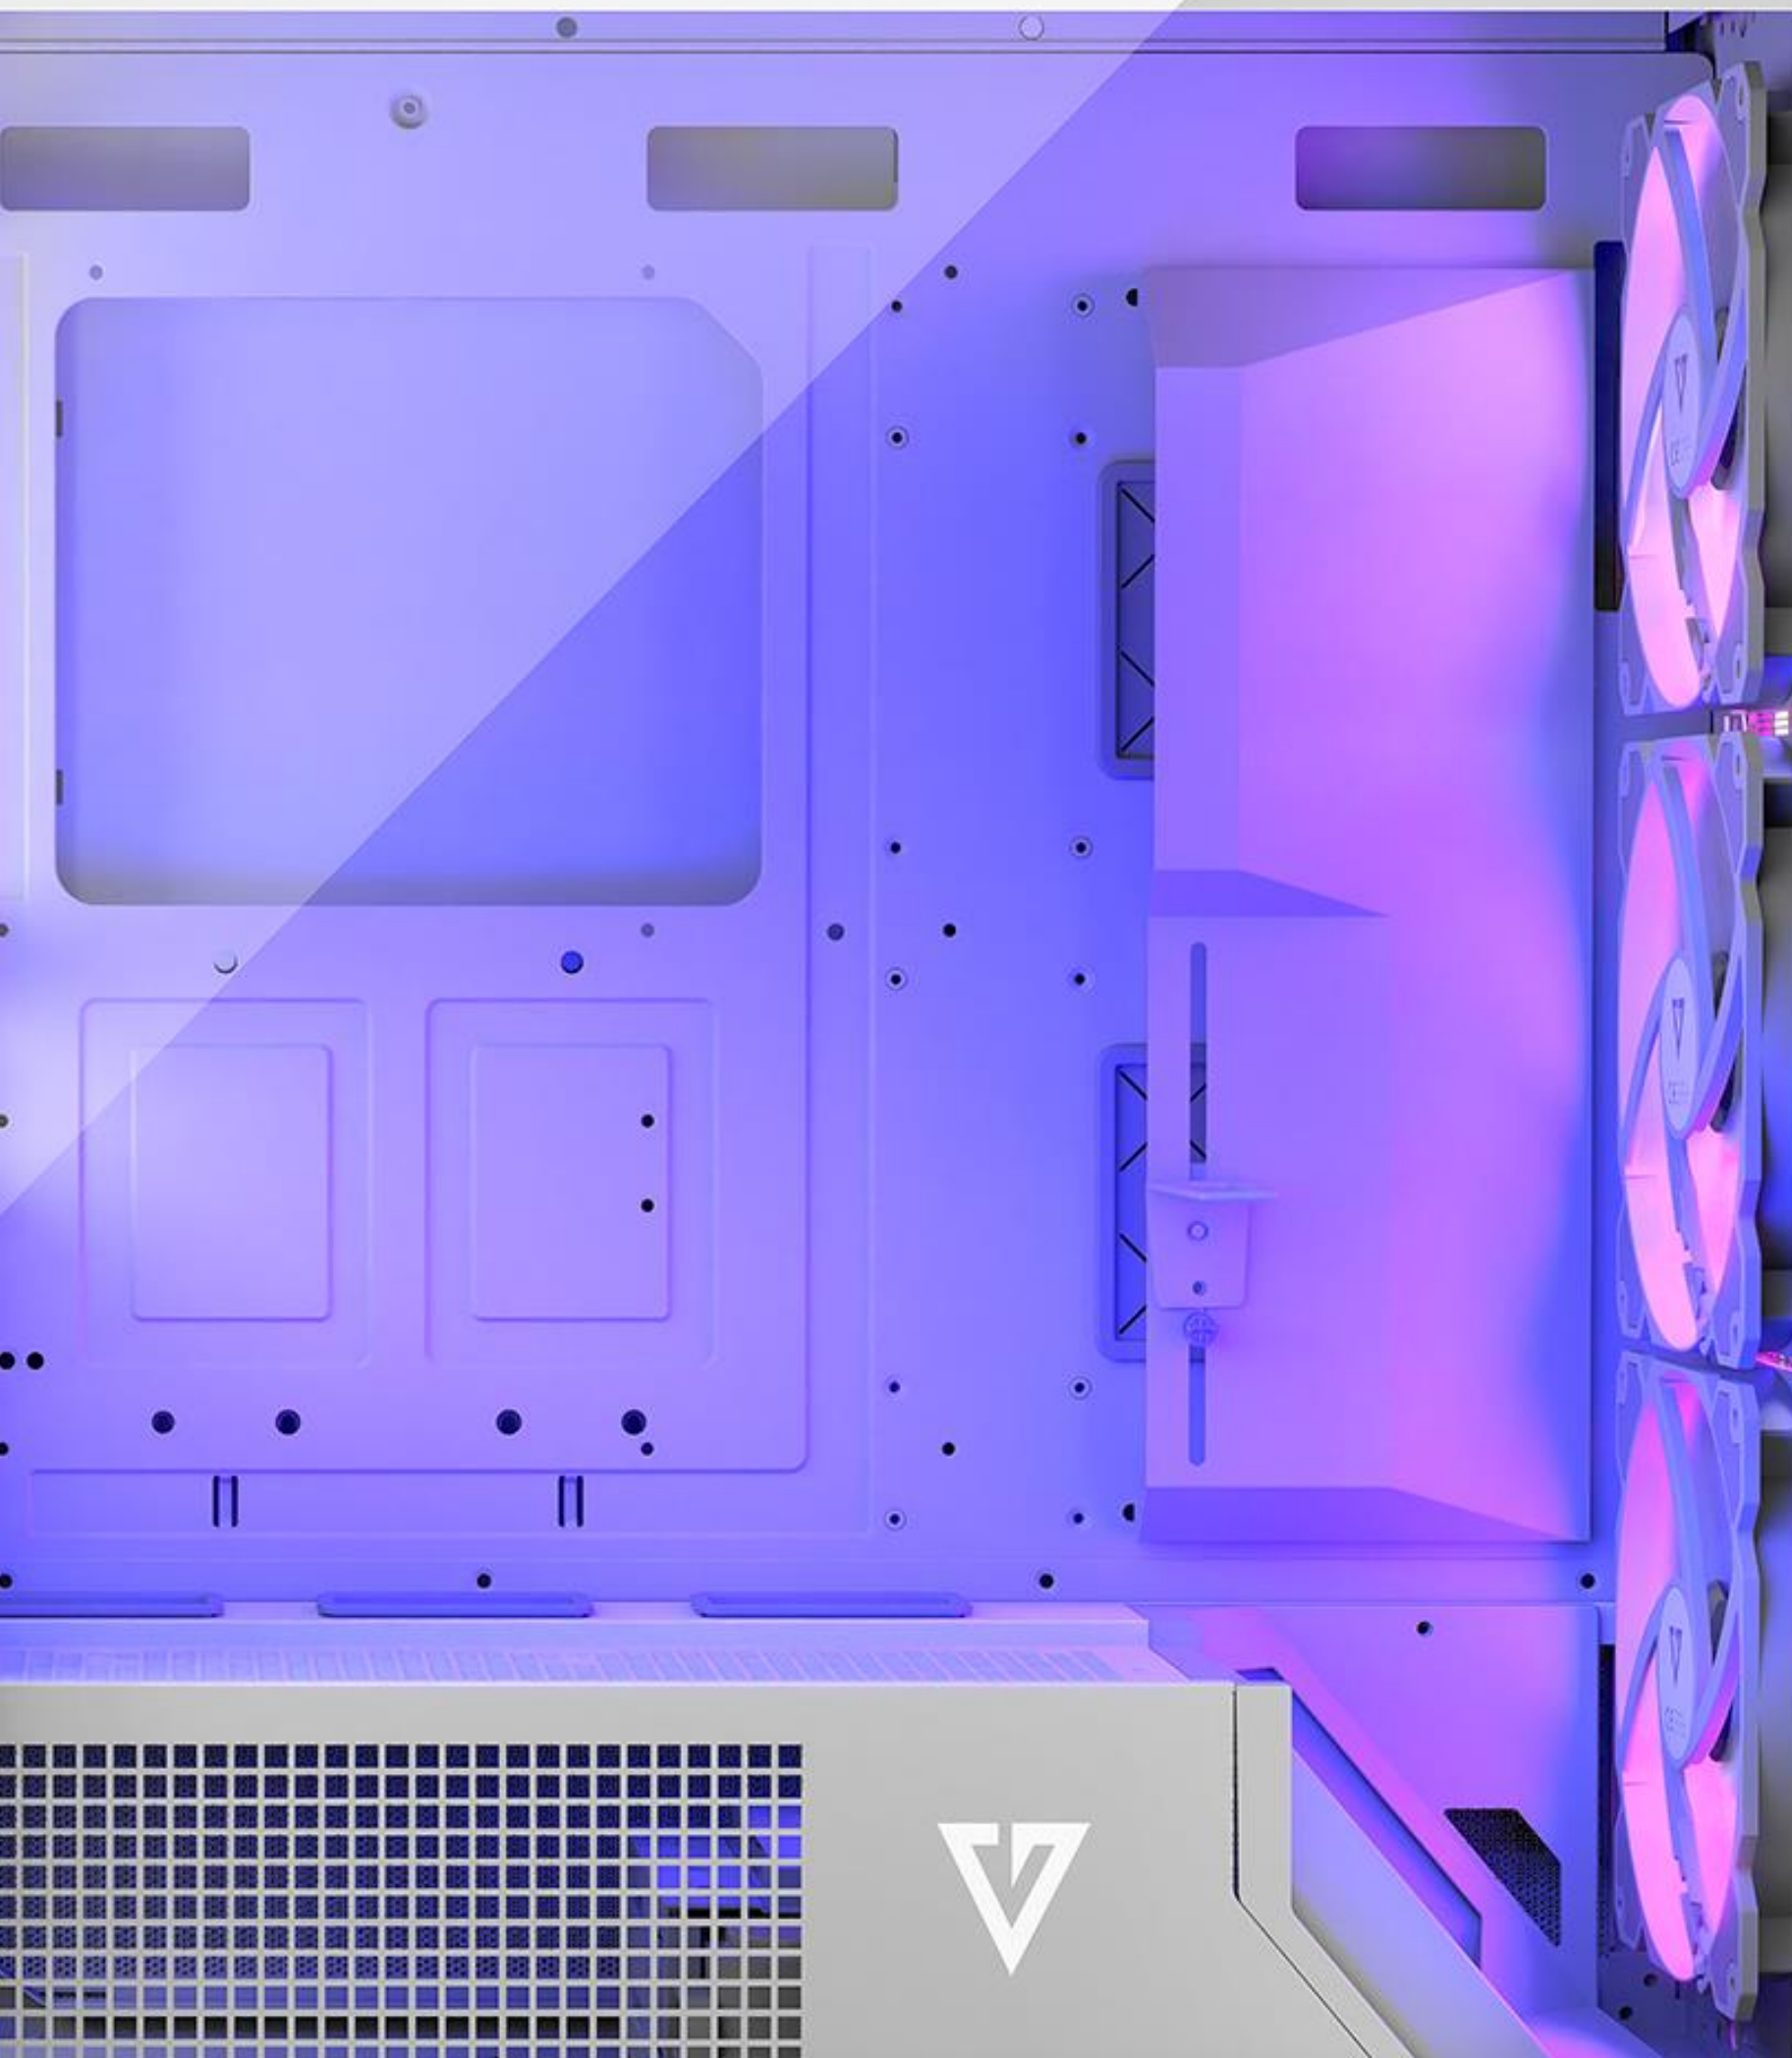

INTERIOR ORGANIZATION

A sliding and removable interior organizing element is one of the key elements of the Volcano Perun structure. There is a height-adjustable GPU support for a long graphics card.

Mounted on special guides on the motherboard mounting wall and moved from right to left, it allows you to install most motherboards with the appropriate amount of space.

The special streamlined shape forces cool air into the interior in an even better way and directs the cool stream to the processor and graphics card.

At the same time, it covers the rubber cable grommets and allows for their optimal organization, affecting the aesthetics of the entire interior.

ONE, TWO, THREE and FOUR

Keeping components running cool is crucial. Thanks to this, they work more efficiently and their service life increases.

Pre-installed ARGB fans (3 x 140 mm at the front and 1 x 140 mm at the back) ensure good airflow, effectively cooling the graphics card and processor.

However, if you want to have even greater configuration options, you can install additional fans and lower the operating temperature of the entire computer.

LIKE THE THUNDER LORD

One of the strongest points of the Volcano Perun is the original and interesting design of the front. The irregular shapes bring to mind thunder and lightning, symbolizing freedom, strength and power.

PERFECT VENTILATION

There are plenty of holes in the case - in the front, on the power supply tunnel and on the side panel from the computer's service part. All this to ensure good air circulation and cool operation not only for components such as the graphics card or processor, but also the power supply and hard drives. Because every element of the computer is important to us!

THERE IS NO PLACE FOR "HOT" HERE

There are ventilation holes on the side panel on the service side of the computer (protected, of course, with a dust filter), which provide even more cold air to keep low temperatures of the components installed in the power supply tunnel.

LOOK PERUN IN THE EYES

The front panel is not only an original design, but also a well-designed element of the entire structure, which provides free access to cool air from outside. The filter located on the front catches dust and dirt, keeping the entire computer clean.

The case is equipped with an ARGB fan controller mounted on the motherboard mounting wall. A total of 6 fans can be connected.

CONTROLLER

NO SCREWS

EASY AND PLEASANT – SIDE PANELS WITH LATCHES

Both side panels are mounted with snaps - you don't need any tools to remove the panel and conveniently install the components.

Need to add RAM? Blow out the dust from the interior? You can remove the panels with a smooth movement of your hand without having to unscrew them.

This is one of the most convenient and pleasant solutions implemented in a computer case.

COMPLETE FREEDOM TO BUILD AN E-ATX COMPUTER

You can install **motherboards up to 310 x 270 mm in the case**, which corresponds to the **size of most popular E-ATX motherboards**. However, if you remove the metal element with the GPU support, you can fit even wider motherboards.

It's up to you what components you want to have installed, so we leave the choice and decisions in your hands. Because in the end, only you will use the solutions offered in this PC case. Let nothing limit you when building your dream computer.

UP TO 420 MM OF WATER COOLING!

The Volcano Perun is ready for water cooling installation. At the top of the case there is space for radiators up to 360 mm. However, at the front there is enough space for radiators up to 420 mm, allowing the installation of effective water cooling systems. Vocalno Perun is ready for even the most advanced configurations for gamers.

TOP COMPONENTS

This PC case is ready for top components installation. Not only there is room for water cooling up to 420 mm, but also for high CPU coolers and long graphics cards.

In the Volcano Perun case you can install a CPU cooler up to 185 mm and graphics cards with a length of 390 mm (with fans installed at the front).

VOLCANO

YOU CAN NEVER HAVE
TOO MUCH SPACE FOR GAMES

There will be plenty of space for your favorite games. You can install up to four 2.5" SSD drives or two 3.5" HDD drives and two 2.5" SSD drives.

Space for mounting drives is provided on the motherboard trays and in the basket located in the power supply tunnel. By adding M.2 space on the motherboard, you can build a real gaming, study and work machine that will never run out of space.

DUST FILTERS

There is a dust filter under the power supply. You can easily remove and install the filter, which will keep your computer clean and at the same time increase the efficiency and safety of the power supply.

Two additional magnetic filters are located on the top and on the ventilated side panel. They are easily accessible and can be conveniently dismantled.

The last filter, attached with screws, is located on the front element of the front panel.

BEAUTY OF ARGB LED

Four ARGB LED fans as make an impression in any gamer's room. They illuminate not only gaming components but also the entire desk with intense light. However, if you are not a fan of the backlight, no worries - you can turn it off conveniently using the button on the top panel. After all, it's your computer.
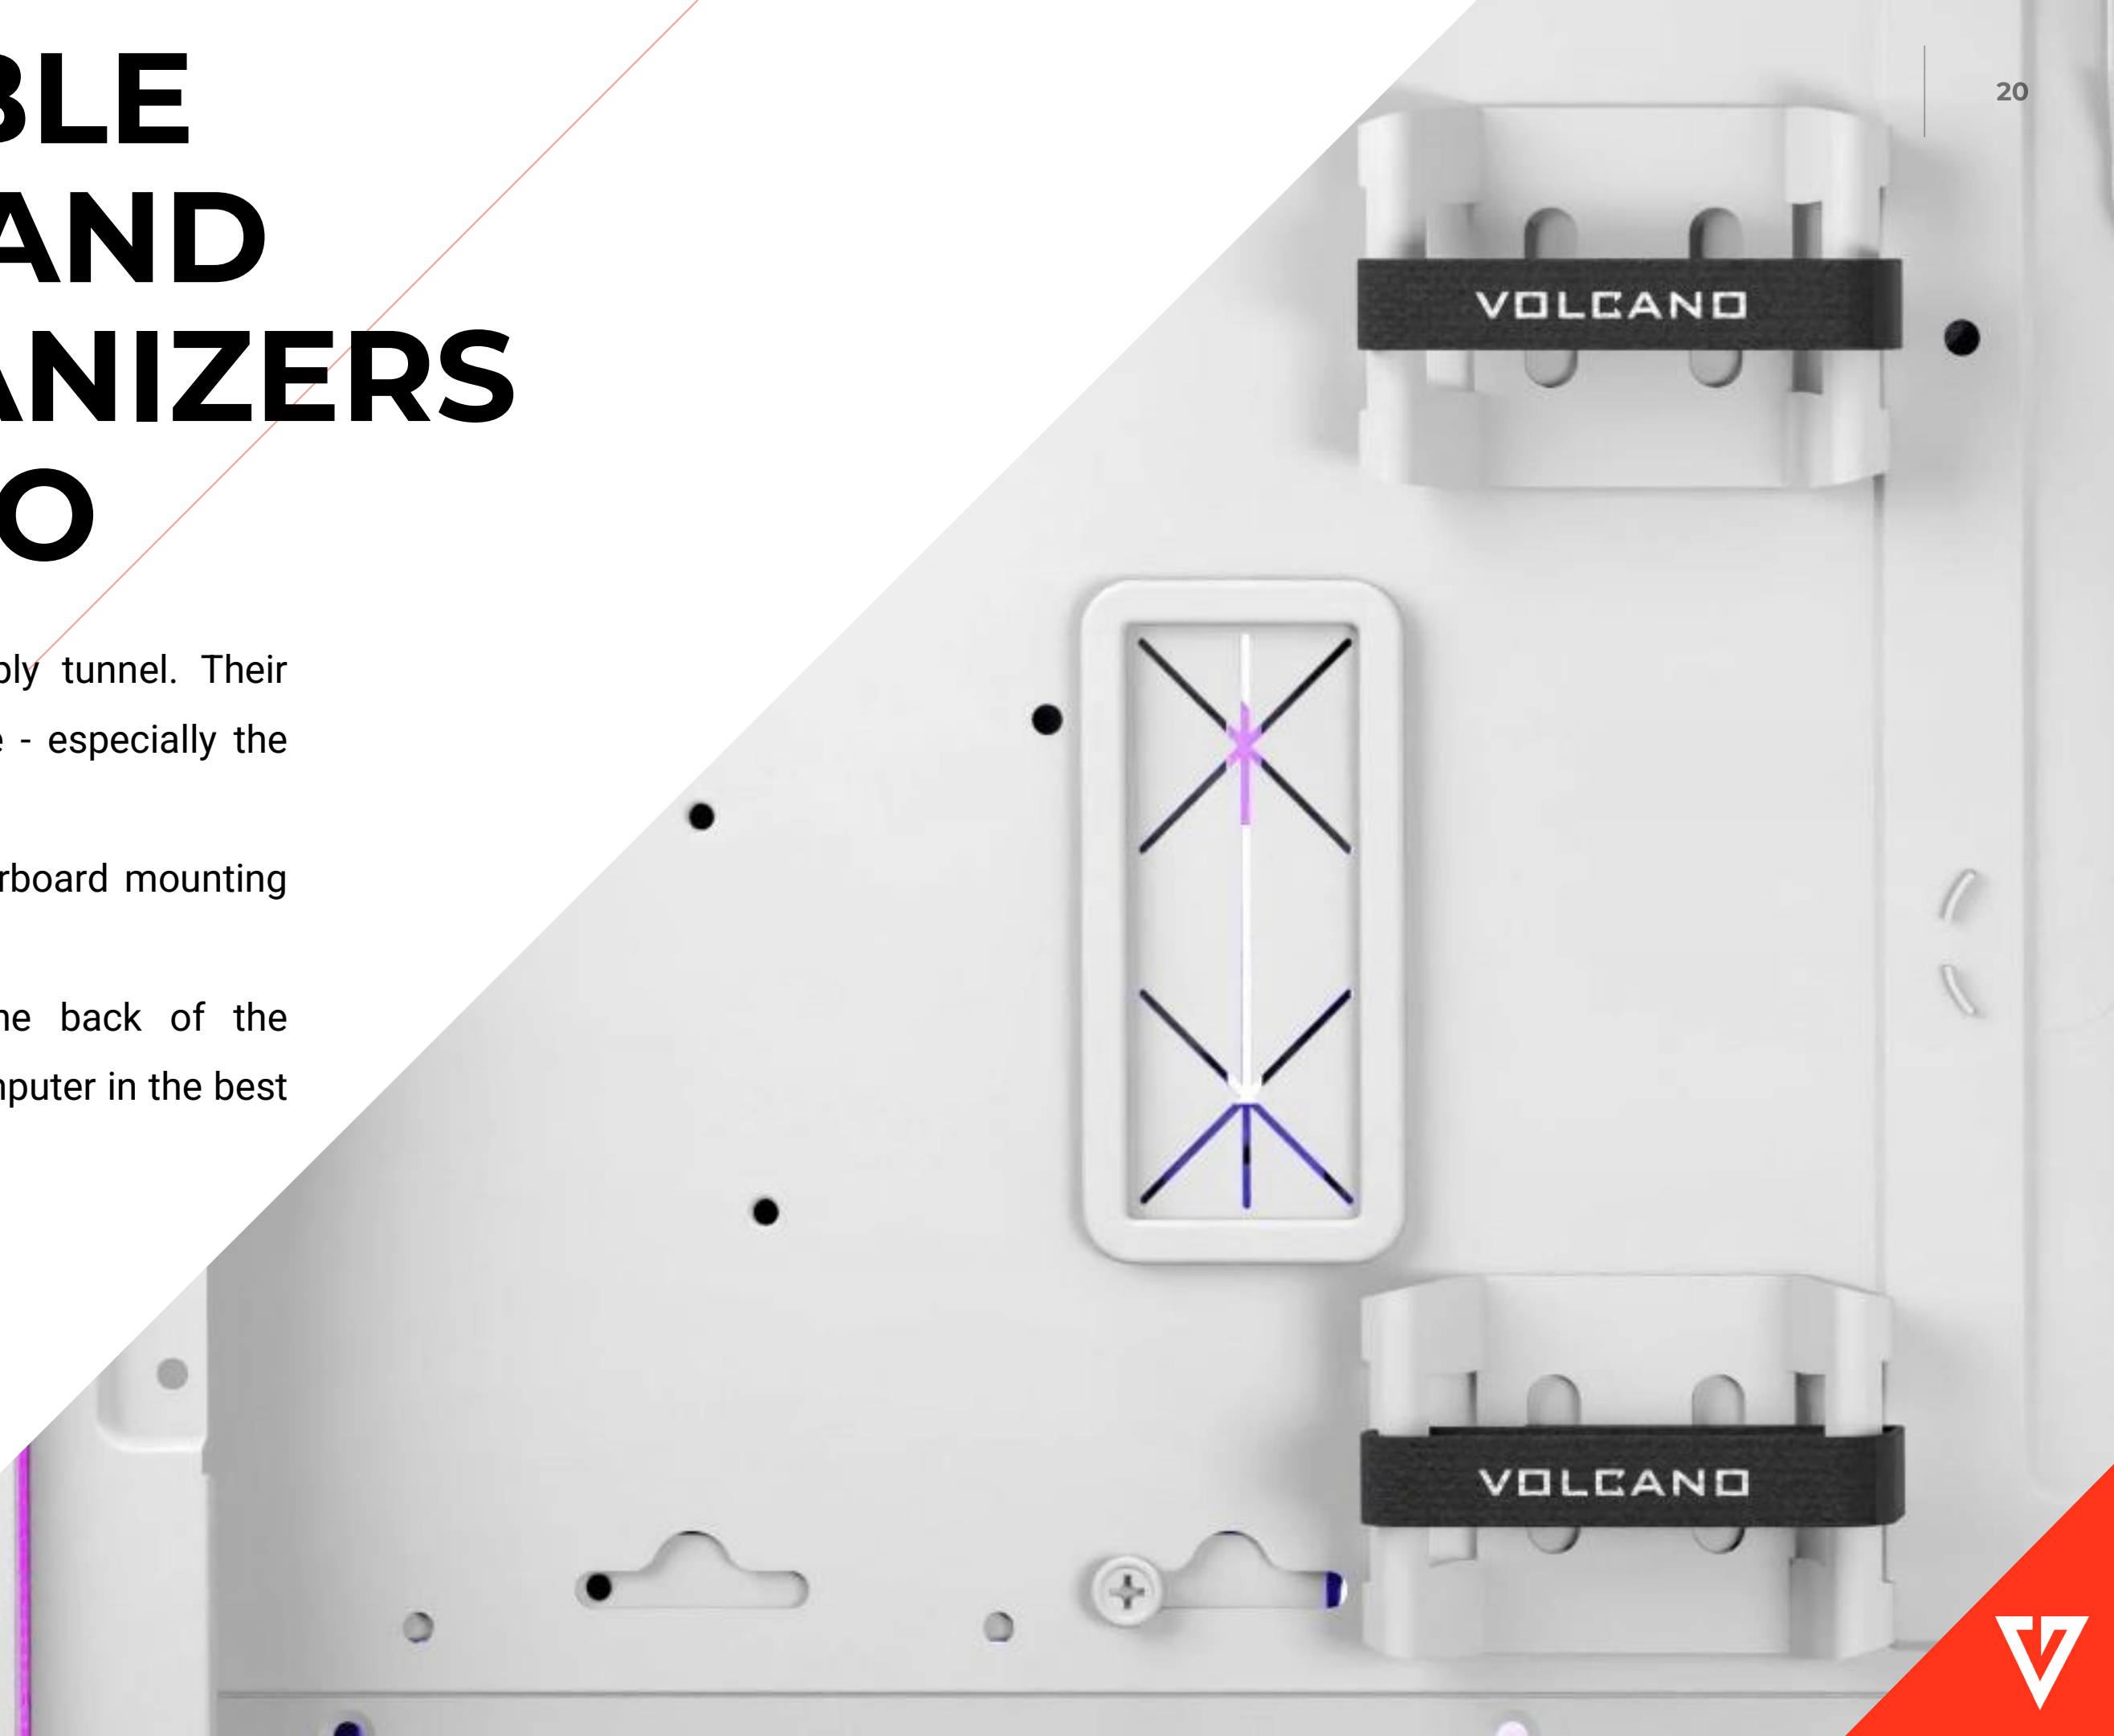

RUBBER CABLE GROMMETS AND CABLE ORGANIZERS WITH VELCRO

There are rubber grommets on the power supply tunnel. Their purpose is to protect the cables against damage - especially the graphics card power cable.
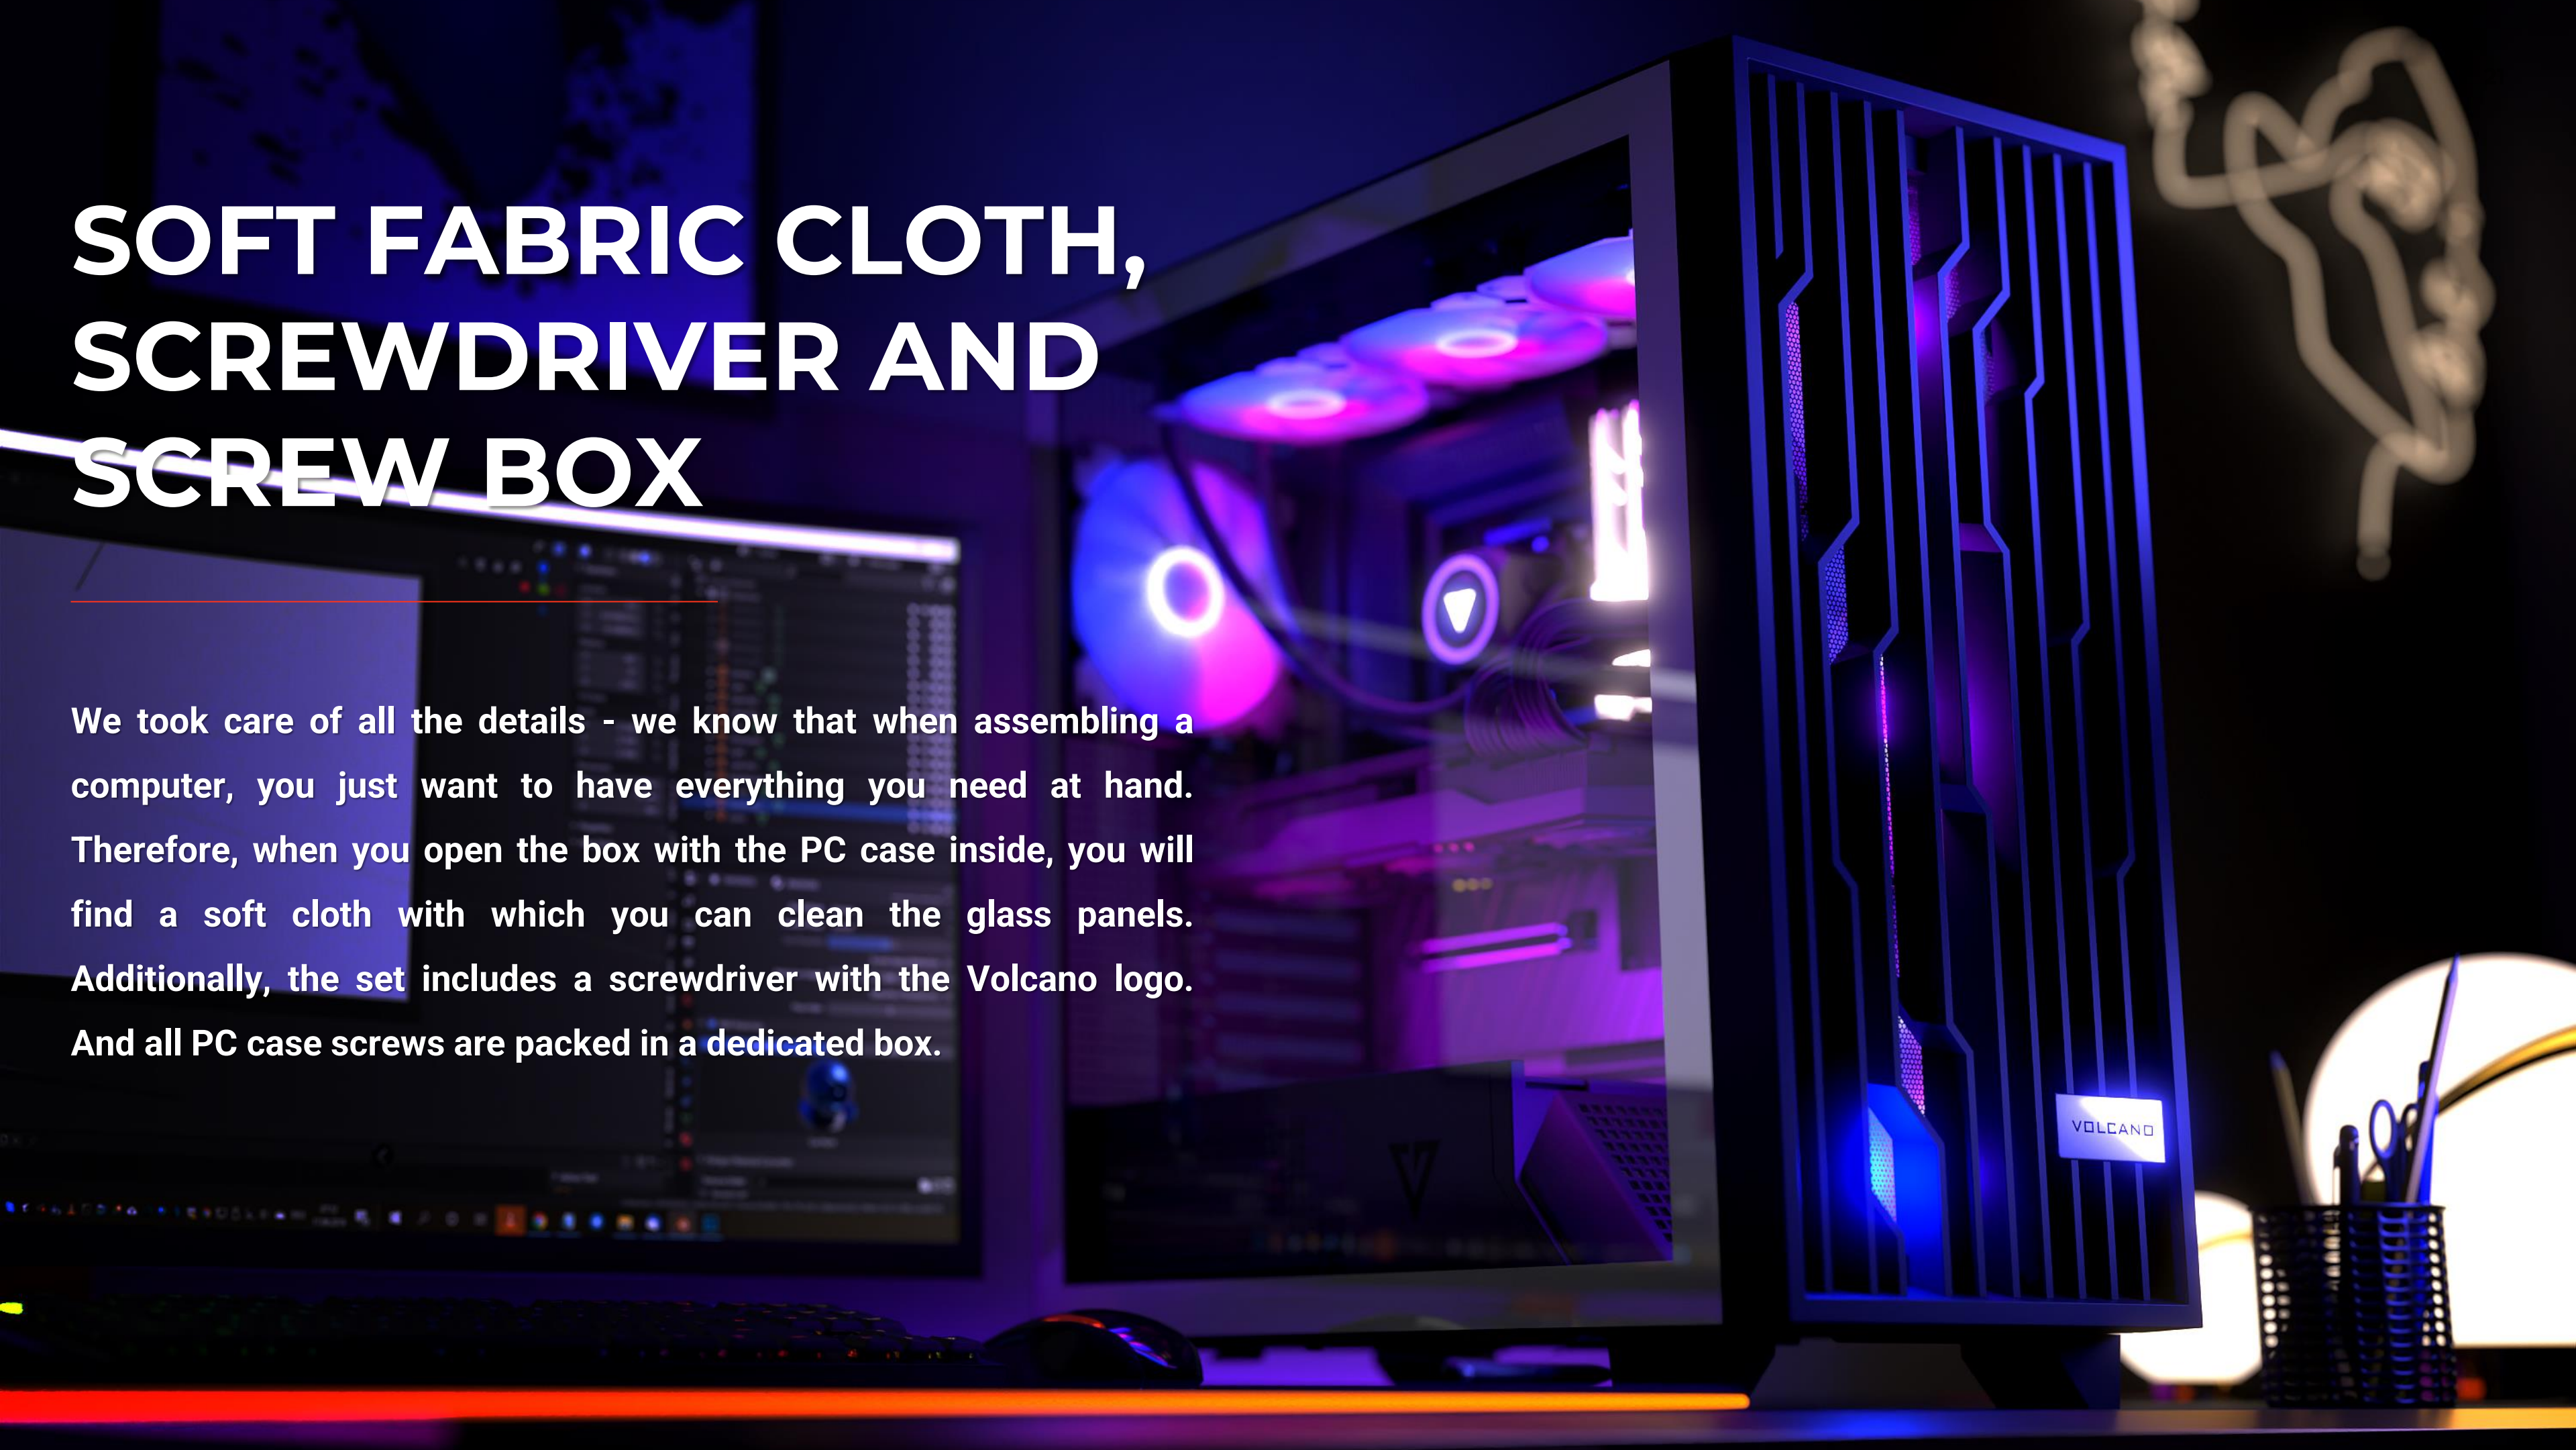

Rubber grommets are also located on the motherboard mounting wall and there are five of them in total.

There are also Velcro cable organizers on the back of the motherboard tray to organize the inside of the computer in the best possible way.

SOFT FABRIC CLOTH, SCREWDRIVER AND SCREW BOX

We took care of all the details - we know that when assembling a computer, you just want to have everything you need at hand. Therefore, when you open the box with the PC case inside, you will find a soft cloth with which you can clean the glass panels. Additionally, the set includes a screwdriver with the Volcano logo. And all PC case screws are packed in a dedicated box.

ADDITIONAL COOLING?
HERE YOU GO!

There is, of course, mounting space for additional fans on the top panel. If you wish, you can very conveniently mount additional fans in a 3 x 120 mm or 3 x 140 mm configuration at the top. But that's not all, because there is still room for two 120 mm fans on the PSU tunnel.

All this to maintain the lowest possible temperatures and thus ensure comfort during many hours of intense and "hot" computer sessions.

REMOVABLE COVERS AND VERTICAL GPU MOUNTING

All PCI/PCIe expansion card covers are removable. Players will also appreciate the possibility of vertically mounting the graphics card, because the metal frame in which the covers are placed can be unscrewed.

There are eight cover sloth for PCI/PCIe expansion cards in the case, which allows you to install the most advanced (and therefore thick and long) graphics cards.

VOLCANO

10 REASONS WHY IT'S WORTH HAVING IT

01.   **ARGB**   The ARGB function allows you to freely illuminate your gaming computer.

02.   **FANS**   Four pre-installed 140 mm fans. Additional possibility of installing extra fans by yourself. The case is also adapted to install water cooling. Controller as standard.

03.   **AIRY**   Airy PC case with numerous holes for the best possible airflow.

04.   **VERTICAL GPU MOUNTING**   The case allows vertical installation of the graphics card.

05.   **RUBBER GROMMETS**   Inside, there are rubber cable grommets for the cable entry holes on the PSU tunnel and on the motherboard mounting wall. Their purpose is to protect the cables against damage.

10 REASONS WHY IT'S WORTH HAVING IT

06. ## INSTALLATION OF DISKS

Hard drives - a 2.5" drive can be mounted on the back of the motherboard tray, while space for additional 2.5" and 3.5" drives is provided in the power supply tunnel. This gives a lot of freedom in interior design.

07. ## PSU TUNNEL

The power supply tunnel separates the PSU from other components. This solution ensures a lower temperature inside the PC case and has a positive effect on the aesthetics.

08. ## SIDE PANELS

Side panel made of tempered glass. Mounted without screws - with snaps. Easy, simple and pleasant.

09. ## DUST FILTERS

Dust filters to keep the interior as tidy and clean as possible.

10. ## DESIGN

Interesting and modern design of the front panel.

Huge possibilities   Effective solutions   Fun to play

WHO IS THE VOLCANO PERUN PC CASE FOR?

Airy design, side panel made of tempered glass fastened with snaps, four pre-installed 140 mm ARGB fans, fan controller, wide possibilities of arranging the computer and original design of the front panel.

THIS IS WHERE IT STARTED

GAMING SOURCE

Volcano Expanse for players looking for proven solutions.

Volcano Amirani ARGB case – this is where the real gaming of the Volcano case series began. Appreciated not only by specialist editorial offices, but above all by users.

FINALLY WITHOUT CABLES

Volcano Space is a must-have for all fans of gaming structures who want to admire the exposed components.

WHAT A GOOD CASE!

Volcano Perun is a great proposition for everyone looking for a bold and modern style.

INCLUDED

Model   VOLCANO PERUN APEX ARGB MIDI

Case type	Midi tower
Purpose	Gaming
Case dimentions	473*235*518 mm (L*W*H)
Max motherboard	ATX/ Micro ATX/ ITX Possibility of mounting an E-ATX board up to 270 mm wide
Ports I/O panel	
• USB 3.0	2
• USB Type C	1
• Mic input	Yes
• Headphones input	Yes / HD AUDIO
Disk mounting place	
• Max number of drives and configuration	4 in configuration: 2 x 3,5" and 2 x 2,5" or 4 x 2,5"
• Max inner 3,5"	2 (disk basket in PSU)
• Max inner 2,5"	4 (two on motherboard tray, two in disk basket in PSU)
Color	White / Black
Tool-free assembly/disassembly of side panels	Yes

Model — VOLCANO PERUN APEX ARGB MIDI

Number of fans installed

- front — 3 x 140 mm ARGB

- rear — 1 x 140 mm ARGB

Possibility to install extra fans

- top — 3 x 120 mm / 3 x 140 mm

- PSU tunnel — 2 x 120 mm

Fans controller — YES. Up to 6 fans.

PCI cover slots — 8 horizontal
3 vertical (after replacing the included frame)

Power supply installation location — PSU tunnel

PSU tunnel — Yes. Maximum length of the power supply with disks installed: 180 mm

CPU cooling height — 185 mm

Maximum length of the graphics card — 390 mm

Additional information

- possibility of installing a water cooling system — Top: 360 mm / 280 mm / 240 mm
Rear: 120 mm / 140 mm
Front: 420 mm / 360 mm / 280 mm / 240 mm

- dust filters — Yes. Bottom, top, front, side

- steel thickness — 0,8 mm

- weight netto — 10,15 kg
