Thanks to this solution, you can enjoy thermal comfort even during long sessions with your favorite games. The remaining part made of eco-leather allows you to maintain the appropriate sound pressure inside the earcups (important for the reproduction of low tones) and outside sound insulation.

# MICROPHONE

## Because the microphone is also important

A flexible microphone, which records the voice very well, has been finished with a sponge that eliminates other sounds that disturb the conversation, such as for example loud breathing.

The microphone is detachable - just twist it and unhook to get rid of it in situations when it is not needed (e.g. while playing single player games or while listening to music).

Communication and team cooperation is crucial in order to gain an advantage over the oponent in virtual games.
