MODECOM MOUSE MC-WM4

MODECOM MC-WM4

MODECOM **MC-WM4** **Wireless Optical Mouse** was designed to provide maximum usability while maintaining competitive cost. Thanks to the advanced optical sensor **MC-WM4** can work on most typical surfaces. It is using radio transmission for connecting to the PC within the 2.4GHz that allows for wireless work at a distance of up to 10m from the receiver. USB interface assures that the mouse can work with virtually any computer available these days. Because the receiver is “nano” type it doesn’t have to be removed from the USB port of your notebook when traveling with it.
